2

This listing of claims will replace all prior versions, and listings, of claims in the application:

Listing of Claims:

- (Previously Presented) A button, comprising:
 a button post to transmit a vertical motion of the button to a first side of
 an electrical switch;
 an alignment post to register against a second side of the electrical
 switch; and
 at least two runners to connect the button to a frame.
- (Original) The button of claim 1, wherein the button is included in a button set that comprises a plurality of buttons.
- (Previously Presented) The button of claim 1, further comprising a
 reinforcement to stiffen the vertical motion of the button, with the
 reinforcement comprising:
 a rectangular panel having two supporting ribs located on diagonals of
 the panel.
- 4. (Previously Presented) The button of claim 1, wherein the alignment post, and the two runners are formed from plastic.
- 5. (Previously Presented) The button of claim 3, wherein the reinforcement is molded along with the two runners.
- 6. (Original) The button of claim 1, wherein the button is located on an electronic device.

3

- 7. (Original) The button of claim 6, wherein the electronic device is selected from the group consisting of: a scanner, a camera, a printer, a copier, a facsimile machine, and a computer.
- 8. (Previously Presented) A button set that comprises a plurality of buttons, each button of the plurality of buttons configured to engage an associated electrical switch of a plurality of electrical switches, the button set comprising:
 a plurality of button posts, each of which is associated with a respective button and configured to transmit a vertical motion of the respective button to a first side of the associated electrical switch;
 a plurality of alignment posts, each of which is associated with a respective button and configured to register against a second side of the associated electrical switch; and
 a plurality of runners, with a pair of runners of the plurality of runners associated with a respective button and configured to connect the respective button to a frame.
- 9. (Previously Presented) The button set of claim 8, wherein each pair of the runners includes a reinforcement comprising: a rectangular panel having two ridges located on diagonals of the panel.
- (Previously Presented) The button set of claim 8, wherein the plurality of alignment posts and the plurality of runners are formed from plastic.
- 11. (Previously Presented) The button set of claim 9, wherein the reinforcement is molded along with the runners.
- 12. (Original) The button set of claim 8, wherein the button set is located on an electronic device.

4

- 13. (Original) The button set of claim 12, wherein the electronic device is selected from the group consisting of: a scanner, a camera, a printer, a copier, a facsimile machine, and a computer.
- 14. (Original) A button for engaging an electrical switch comprising: means for transmitting a vertical motion of the button to the electrical switch; means for reducing lateral motion of the button; and means for stiffening the vertical motion of the button.
- 15. (Original) A button for engaging an electrical switch comprising: means for reducing wobble of the button; and means for reducing dead spots of the button.
